Age-Adjusted Rate of All Cancers±
by County 2001 - 2007

± "All Cancers" refers to all of the following cancers **only**: Acute Lymphocytic Leukemia, Acute Myeloid Leukemia, Bladder Cancer (including In Situ), Brain and Central Nervous Systems Cancer, Brain and Other Nervous Systems Cancer, Breast Cancer, Chronic Lymphocytic Leukemia, Leukemia, Lung and Bronchus Cancer, Non-Hodgkin's Lymphoma, Lymphoid Leukemia, and Thyroid Cancer.

Measures that have been suppressed to protect patient confidentiality have been identified using italic text with a shaded background.

Data Notes:

- This dataset was obtained from the CDC's National Environmental Public Health Tracking (EPHT) Program with the permission of the Missouri Cancer Registry and Research Center (MCR-ARC)
- ± "All Cancers" refers to all of the following cancers **only**: Acute Lymphocytic Leukemia, Acute Myeloid Leukemia, Bladder Cancer (including In Situ), Brain and Central Nervous Systems Cancer, Brain and Other Nervous Systems Cancer, Breast Cancer, Chronic Lymphocytic Leukemia, Leukemia, Lung and Bronchus Cancer, Non-Hodgkin's Lymphoma, Lymphoid Leukemia, and Thyroid Cancer.
- Data presented on this portal may differ from data for the same measure on State Tracking Portals, State Health Department Web sites, and other source Web sites. Refer to the Missouri EPHT Data and Statistical Guide for more information on the creation of this indicator.
- Rates have been calculated based upon residential address at the time of diagnosis.
- For more information on how the "Average Rates/Year" are calculated, please see the Missouri Data and Statistical Guide located at: http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of cancer.
- *Rates based off of small cell counts of 0, 1, 2, 3, and 4 have been suppressed to protect patient confidentiality. In some cases secondary suppression was used to suppress rates based on cell counts >4 to prevent reverse calculation of totals to identify small cell counts.
- No personal exposure information is available, including smoking history, diet, lifestyle, or history of cancer.
-No information is available on the latency of cancer cases.
-County Rates are calculated by using each county's population distribution
-Unknown County rates are calculated by using Missouri's population distribution
-Age-Adjusted rates are calculated by using the Surveillance epidemiology and End Results (SEER) standard population for 19 age groups.
-All rates do not include cases where the age was unknown
