### Data Notes

**General Notes**
- Due to data availability, custom time and geographies are not available.
- Due to the uniqueness of St. Louis City, it has both a County level and City level profile. Data shown may not be the same between the two profiles.
- City boundaries were approximated by using zip codes. Due to this practice, there may be duplicate counts between cities. Cities sharing zip codes include: Blue Springs and Lee’s Summit, O’Fallon and St. Peters, as well as St. Charles and St. Peters.
- Due to population adjustments and city boundary approximations, cities may not be directly comparable.
- Data presented in this profile may differ from data for the same measure on State Tracking Portals, State Health Department Web sites, and other source Web sites. Refer to the Missouri EPHT Data and Statistical Guide ([http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php)) for more information on the creation of included indicators.

**Acute Myocardial Infarction (AMI)**

Average Age-Adjusted rate of hospitalizations, per 10,000 population, for AMI
- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of hospitalizations.
- City Rates are calculated by using each city’s population distribution
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including smoking history, diet, or lifestyle.

**Asthma**

Average Age-Adjusted rate of Emergency Room Visits, per 10,000 population, for Asthma
- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of Emergency Room visits.
- City Rates are calculated by using each city’s population distribution
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including smoking history, diet, or lifestyle.
### Average Age-Adjusted rate of hospitalizations, per 10,000 population, for Asthma

- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of hospitalizations.
- City Rates are calculated by using each city’s population distribution.
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including smoking history, diet, or lifestyle.

### Birth Defects

Rate of select birth defects, per 10,000 live births

- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Vital Statistics - Passive Birth Defects Registry.
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of birth defects.
- No personal exposure information is available, including smoking history, diet, or lifestyle.
- City Rates are calculated by using each city’s live birth distribution.
- All rates do not include cases where the age was unknown.
- Birth defects include: Anencephaly, Spina bifida (w/o anencephaly), Hypoplastic left heart syndrome, Tetralogy of Fallot, Transposition of the great arteries (vessels), Cleft lip with or w/o cleft palate, Cleft palate w/o cleft lip, Hypospadias, Gastroschisis, Upper limb deficiencies, Lower limb deficiencies, and Trisomy 21.
- The count of birth defects includes both live fetal births and fetal deaths.

### Rate of Trisomy 21 (Down's Syndrome), per 10,000 live births

- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Vital Statistics - Passive Birth Defects Registry.
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of birth defects.
- No personal exposure information is available, including smoking history, diet, or lifestyle.
- City Rates are calculated by using each city’s live birth distribution.
- All rates do not include cases where the age was unknown.
- The count of birth defects includes both live fetal births and fetal deaths.
## Childhood Blood Lead

| All Children Tested Age 0 - 72 months for Blood Lead Level | - This dataset was obtained from the Missouri Childhood Lead Poisoning Prevention Program (CLPPP).  
- Counts have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.  
- Measures should not be compared across states. Childhood blood lead testing practices vary. Some states require all children be tested while other states target high-risk children.  
- Because Data are not randomly sampled or representative of the population, number and Percent of children tested with elevated blood lead levels cannot be interpreted as prevalence or incidence for the population.  
- Unconfirmed elevated blood lead tests are those where there was an elevated capillary test, but no follow-up test completed within 12 weeks.  
- Elevated blood lead levels are confirmed by either one elevated venous test or two elevated capillary or unknown specimen tests less than 12 weeks apart. |
|---|---|
| Childhood Blood Lead Testing by Birth Cohort (children age 0 - 36 months) | - This dataset was obtained from the Missouri Childhood Lead Poisoning Prevention Program (CLPPP).  
- A birth cohort consists of all children born in a given year. This measure reports blood lead levels among those children within a birth cohort who were tested before 3 years of age.  
- Counts have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.  
- Percent of Birth Cohort tested may be above 100%. This can occur when children live and/or are tested in a city that is different from the city of birth.  
- Measures should not be compared across states. Childhood blood lead testing practices vary. Some states require all children be tested while other states target high-risk children.  
- Because Data are not randomly sampled or representative of the population, number and Percent of children tested with elevated blood lead levels cannot be interpreted as prevalence or incidence for the population.  
- Unconfirmed elevated blood lead tests are those where there was an elevated capillary test, but no follow-up test completed within 12 weeks.  
- Elevated blood lead levels are confirmed by either one elevated venous test or two elevated capillary or unknown specimen tests less than 12 weeks apart. |

## Carbon Monoxide (CO)

| Age-Adjusted rate of emergency room visits, per 100,000 population, for CO | - This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).  
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.  
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).  
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of Emergency Room visits.  
- City Rates are calculated by using each city’s population distribution  
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.  
- All rates do not include cases where the age was unknown.  
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.  
- No personal exposure information is available, including smoking history, diet, or lifestyle. |
### Age-Adjusted rate of hospitalizations, per 100,000 population, for CO

- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the "Average Rates/Year" are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of hospitalizations.
- City Rates are calculated by using each city's population distribution.
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including smoking history, diet, or lifestyle.

### Heat

### Age-Adjusted rate of emergency room visits, per 100,000 population, for Heat

- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the “Average Rates/Year” are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of Emergency Room visits.
- City Rates are calculated by using each city’s population distribution.
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including lifestyle, outdoor activity, contributing health conditions, occupation, air conditioning use, etc.
- Rates are based on counts occurring during the months of May through September.
### Age-Adjusted rate of hospitalizations, per 100,000 population, for Heat
- This dataset was obtained from the Missouri Department of Health and Senior Services’ Bureau of Health Care Analysis & Data Dissemination/Patient Abstract System (PAS).
- Rates have been calculated based upon residential address at the time of diagnosis. No information is available on prior residences.
- For more information on how the "Average Rates/Year" are calculated, please see the Missouri Data and Statistical Guide located at: [http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php](http://ephtn.dhss.mo.gov/EPHTN_Data_Portal/index.php).
- Geocoding accuracy, level of geocoding, and geocoding completeness may vary by time and space. This could potentially create geographically non-random errors in calculated counts and rates of hospitalizations.
- City Rates are calculated by using each city’s population distribution.
- Age-Adjusted rates are calculated by using the Surveillance Epidemiology and End Results (SEER) standard population for 19 age groups.
- All rates do not include cases where the age was unknown.
- Rates for 2010 were adjusted using the 2000 Decennial Census population numbers.
- No personal exposure information is available, including lifestyle, outdoor activity, contributing health conditions, occupation, air conditioning use, etc.
- Rates are based on counts occurring during the months of May through September.

### Water
- This dataset was obtained from the Missouri Department of Natural Resources (DNR).
- Missouri American St. Louis County / St. Charles County water supply was used to calculate values for the cities of Florissant and Chesterfield.
- (NS) Water sampled for a specific analyte during the report year.
- (ND) A water sample is designated as “non-detect” when the laboratory analysis cannot detect the analyte being measured. A measure is designated as “non-detect” when samples from the same community water system (CWS) were non-detect for an entire year or quarter.

</table>
| - This dataset was obtained from the Missouri Highway Patrol - Uniform Crime Reporting Program. For More information go to: [http://www.mshp.dps.missouri.gov/MSHPWeb/Publications/UCR/DATANOTES.pdf](http://www.mshp.dps.missouri.gov/MSHPWeb/Publications/UCR/DATANOTES.pdf)  
- Property Crimes include burglary, larceny-theft, motor vehicle theft, robbery, and arson.  
- Rates do not include crimes where the city was unknown. |

## Food & Beverage

<table>
<thead>
<tr>
<th>Rate of establishments selling fresh produce, per 10,000 population</th>
<th>Description</th>
</tr>
</thead>
</table>
| - Data for supermarkets and other grocery stores (except convenience stores) and fruit and vegetable markets was obtained from the United States Census Bureau - County Business Patterns. For more information go to: [http://www.census.gov/econ/cbp/index.html](http://www.census.gov/econ/cbp/index.html).  
- Data for farmer's markets was obtained from the Missouri Farmer's Market Directory ([http://agebb.missouri.edu/fmktdir/view.asp](http://agebb.missouri.edu/fmktdir/view.asp)) and AgriMissouri ([http://agrimissouri.com/mo-grown](http://agrimissouri.com/mo-grown)).  
- This dataset only includes supermarkets and other grocery stores (except convenience stores) with a North American Industrial Classification Code (NAIC) of 445110, fruit and vegetable markets with a NAIC of 445230, and farmer's markets. |

<table>
<thead>
<tr>
<th>Percent of restaurants that are fast food</th>
<th>Description</th>
</tr>
</thead>
</table>
| - This dataset was obtained from the United States Census Bureau - County Business Patterns. For more information go to: [http://www.census.gov/econ/cbp/index.html](http://www.census.gov/econ/cbp/index.html).  
- This dataset only includes limited-service restaurants (fast food) with a North American Industrial Classification Code (NAIC) of 722211 and full-service restaurants with a NAIC of 722110.  
- The percent of fast food restaurants is calculated by dividing the number of limited-service restaurants by the total number of restaurants within a city. |

<table>
<thead>
<tr>
<th>Ratio of fast food establishments to those selling fresh produce</th>
<th>Description</th>
</tr>
</thead>
</table>
| - This dataset was obtained from the United States Census Bureau - County Business Patterns. For more information go to: [http://www.census.gov/econ/cbp/index.html](http://www.census.gov/econ/cbp/index.html).  
- Data for farmer's markets was obtained from the Missouri Farmer's Market Directory ([http://agebb.missouri.edu/fmktdir/view.asp](http://agebb.missouri.edu/fmktdir/view.asp)) and AgriMissouri ([http://agrimissouri.com/mo-grown](http://agrimissouri.com/mo-grown)).  
- Fresh produce only includes supermarkets and other grocery stores (except convenience stores) with a North American Industrial Classification Code (NAIC) of 445110, fruit and vegetable markets with a NAIC of 445230, and farmer's markets.  
- Fast food only includes limited-service restaurants (fast food) with a North American Industrial Classification Code (NAIC) of 722211, Meat Markets with a NAIC of 445210, and gas stations with convenience stores with a NAIC of 447110.  
- The ratio is calculated by dividing the number of establishments that sell fast/convenient food by the number of establishments that sell fresh produce. The resulting value is the number of establishments selling fast/convenience food for each individual establishment selling fresh produce. |
| Rate of establishments selling tobacco, per 100,000 population | - This dataset was obtained from the United States Census Bureau - County Business Patterns. For more information go to: [http://www.census.gov/econ/cbp/index.html](http://www.census.gov/econ/cbp/index.html).
- Data on the population per city was obtained from the United States Census Bureau: 2010 Census.
- This dataset only includes stores who are identified as Tobacco Retailers and are assigned a North American Industrial Classification Code (NAIC) of 453991. |
|---|---|
| Rate of establishments selling alcohol, per 100,000 population | - This dataset was obtained from the United States Census Bureau - County Business Patterns. For more information go to: [http://www.census.gov/econ/cbp/index.html](http://www.census.gov/econ/cbp/index.html).
- Data on the population per city was obtained from the United States Census Bureau: 2010 Census.
- This dataset only includes drinking places that serve alcohol with a North American Industrial Classification Code (NAIC) of 722410 plus beer, wine, and liquor stores with a NAIC of 445310. |
| Percent of households spending 30% or more of their income on housing | - This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table B25106. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/). |
| Percent of vacant housing | - This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/). |
| Percent of households that are overcrowded | - This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).
- Overcrowded is defined as occupied housing with more than 1 person per room. |
| Percent of housing that is rural | - This dataset was obtained from the United States Census Bureau: 2010 Decennial Census, Summary File 1, Table H2.
- Rural areas exclude both Census defined "Urbanized Areas" and "Urban Clusters". Urbanized areas are places which have a population of 50,000 or greater. Urban Clusters are those places which have a population greater than 2,500 but less than 50,000.
- 2010 figures were determined using urban and rural boundaries from the 2000 Census. |
| Percent of housing that: |
| - Uses wood as a heating source; | - This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/). |
| - Does not have a fuel heating source | |
| Percent of housing that lacks complete plumbing facilities | - This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).
- Lack of Plumbing facilities means that the house is missing at least one of the following: hot and cold running water, a flush toilet, and/or a bathtub or shower. |
### Percent of housing that lacks complete kitchen facilities
- This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).
- Lack of Kitchen facilities means that the house is missing at least one of the following: a stove or range, refrigerator, and/or a sink with a faucet.

### Percent of housing that has no telephone service
- This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).
- No telephone service means that there is no working telephone within the house. Telephone service that has been disconnected due to non-payment is included in this number.

### Percent of housing that has no bedroom
- This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP04. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).

### Population & Households

#### Percent of individuals living in non-institutionalized group quarters (excluding colleges, universities, and military barracks)
- This dataset was obtained from the United States Census Bureau: 2010 Decennial Census, Summary File 1, Table PCT20.
- Non-Institutional quarters include: emergency and transitional shelters (with sleeping facilities) for people experiencing homelessness, group homes intended for adults, residential treatment centers for adults, workers' group living quarters and Job Corps centers, and other non-institutional facilities, excluding college/university housing and military housing.
- Percent of individuals living in non-institutional group quarters was determined by dividing the number of non-institutional group residents by the total city population.

#### Percent of individuals living in institutionalized group quarters
- This dataset was obtained from the United States Census Bureau: 2010 Decennial Census, Summary File 1, Table PCT20.
- Institutional quarters include: Federal detention centers and prisons, state prisons, local jails and other municipal confinement facilities, and correctional residential facilities.
- Percent of individuals living in institutional group quarters was determined by dividing the number of institutional group residents by the total city population.

#### Percent of foreign-born residents
- This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP02. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).

#### Percent of residents who are:
- Black or African American;
- Native American;
- Asian;
- Hispanic or Latino
- This dataset was obtained from United States Census Bureau: American Community Survey 2011 ACS 5-year Estimates, Table DP05. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).

### Percent of individuals with disabilities
- This dataset was obtained from United States Census Bureau: American Community Survey 2012 ACS 3-year Estimates, Table S1810. For more information on the American Community Survey go to: [http://www.census.gov/acs/www/](http://www.census.gov/acs/www/).
